aintegumaenta-like protein - Arabidopsis thaliana
N,Alternate names: protein T12E18.10
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 20-Apr-2000
C;Accession: T47591
R;Bloecker, H; Mewes, H.W.; Lemcke, K.; Mayer, K.F.X.; Quetier, F.; Salanoubat N submitted to the Protein Sequence Database, March 2000
A;Reference number: Z24469
A;Accession: T47591
A;Scratus: preliminary
A;Molecule type: DNA
A;Residues: 1-205 <BLO-
A;Cross-references: EMBL;AL132971
A;Experimental source: cultivar Columbia; BAC clone T12E18

During floral organ, differentiation it becomes spatially restricted to specific organ, tissue, and cell types within the flower.

INDUCTION: Negatively regulated by the C class floral homeotic protein AGAMOUS in stamens and carpels.

MISCELLANEOUS: Mutations in the APETALA2 gene result in the ectopic expression of AGAMOUS, leading to the replacement of sepals by carpels and stamens and of petals by stamens.

SIMILARITY: Contains 2 AP2/ERF domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PUNCTION: Probable transcriptional activator that promotes early floral meristem identity. Is required subsequently for the transition of an inflorescence meristem into a floral meristem. Plays a central role in the specification of floral identity, particulary for the normal development of sepals and petals in the wild-type flower. Acts as A class cadastral protein by repressing the C class floral homeotic gene AGAMOUS in association with others repressors like LEUNIG and SEUSS. It is also required
                                                                                                                                                                                                                                                                                                                                                                     s SWISS-PROT entry is copyright. Involved in neuronal cell fate, survival and axon guidance, cell cycle regulation and repression of head identity in the embryonic trunk way act with the Hox gene Deformed and the EGF receptor signaling pathway. Positive regulator of the Wg pathway in larval tissues but not in embryonic tissues. May act as a transcriptional corepressor protein, which repress transcription via the
                                                                                                                                                                  zygotically.
SIMILARITY: Belongs to the Spen family.
SIMILARITY: Contains 3 RNA recognition motif (RRM) domains.
SIMILARITY: Contains 1 SPOC domain.
SIMILARITY: Contains 1 SPOC domain.
CAUTION: It is uncertain whether Met-1 or Met-7 is the initiator.
                                                                                                                                                                                                                                                                                                Name=4; Synonyms=SpenS;

Note=Produced by alternative splicing of isoform 2;
NISSUE SPECIFICITY: Ubiquitous. Expressed prior to cellularization in stage 3 embryos, and in blastoderm cells, including pole cells. Expressed throughout the rest of embryogenesis. Later, it is expressed at higher level in epidermal cells and CNS.
DEVELOPMENTAL STAGE: Isoform 3 is expressed both maternally and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression in flowers.

DOMAIN: Contains two distinct DNA-binding domains. One is located in the N-terminal region and binds to the 5'-CAACA-3' motif. The second is located in the C-terminal region and binds to the 5'-CACCTG-3' motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ence 302:842-846(2003).
FUNCTION: Binds specifically to bipartite recognition sequences composed of two unrelated motifs, 5'-CAACA-3' and 5'-CACCTG-3'.
SUBUNIT: Monomer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: Nuclear (Probable).
TISSUE SPECIFICITY: Expressed in all tissues examined: Roots, rosette leaves, cautine leaves, inflorescence stems, flowers an siliques. Highest expression in roots and rosette leaves. Very
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: Contains 1 AP2/ERF domain.

Binds also to the transactivation domain of the equine infectious anenia to thrus (EIAV) nuclear transcriptional activator, Tat. It is probably the cis-acting transactivation response element (TAR) RNA binding cofactor for Tat. Does not bind to the transactivation domain of the HIV-1 nuclear transcriptional activator.

SUBCUNIT: Associates with CDK9 to form P-TEFB. Cyclin T1 is the predominant cyclin associated with CDK9 (By similarity).

SIMILARITY: Belongs to the cyclin family. Cyclin C subfamily.

Mol. Biol. Evol. 20:1281-1289(2003).

-!- FUNCTION: Could be a global transcriptional regulator. Modifies gene expression by affecting chromatin. May be involved in brain development and facial morphogenesis.
-!- SUBUNIT: Probably binds EZH2. Binds annexin V in a calcium and phosphatidylcholine/phosphatidylserine-dependent manner (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATRX PANTR STANDARD; PRT; 2492 AA.

-! DEVELOPMENTAL STAGE: Expressed throughout development with a peak during the mound stage of morphogenesis.
-!- SIMILARITY: Belongs to the Tyr family of protein kinases.
-!- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
                                                                                                                                  SEQUENCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pfam; PF00069; pkinase; Pfam; PF00536; SAM; 1. Binds also to the transactivation domain of the HIV-1 nuclear transcriptional activator, Tat. It is probably the cis-acting transactivation response element (TAR) RNA-binding cofactor for Tat. Also serves as an essential cofactor for HIV 2-Tat and similar immunodeficiency virus (African mandrill) Tat function.

1. SUBCUNIT: Associates with CDM9 to form P-TEFB. Cyclin T1 is the predominant cyclin associated with CDM9 (By similarity).

1. SUBCELULLAR LOCATION: Nuclear (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
